PROJECTS

Fitness Tracker | https://fitness-tracker-project3.herokuapp.com/ | https://github.com/warnerhannah/project3-fitness-tracker
- Full stack fitness/weight tracking application. Fitness Tracker was developed to help our users keep track of their fitness regiments and health statistics. Make a profile and begin to keep track of your daily, weekly and monthly goals.
- Helped with original concept, design, backend, database, React API routes, links, MongoDB models and connecting front end components (calendar, weight graph, calorie graph, Edamame API)
- React.js, MongoDB, Express.js, Node.js, ES6 JavaScript

Actualize Yourself | https://actualize-yourself.herokuapp.com/ | https://github.com/Neuromancer93/Actualize-Yourself
- A unique task manager, Actualize Yourself is focused on the person, the process of improving, and long-term goals, with a great UI and timeline feature.
- Helped with original project idea, design, and front end features (timeline, UI/UX)
- Javascript, SQL, Express.js, Handlebars.js, Node.js

Online Bookcase | https://neuromancer93.github.io/OnlineBookcase/ | https://github.com/Neuromancer93/OnlineBookcase
- An easy to use website for keeping track of all the books in your collection. With this website you can create a database of all the books you own.Simply scan the ISBN bar code or search for the book manually and this website will log and list some of its data, including title, author, published date, page and a short description.
- Helped with original concept, design, set up Google books API, set up Firebase real-time database, CSS.
- JavaScript, jQuery, Firebase, HTML5, CSS3, Google books API

EXPERIENCE

Faculty Compensation Analyst   2017 – 2019
UCSD-School of Medicine   San Diego, CA
